

MEASUREMENT PLANNING

Marketing KPI Worksheet

Turn business goals into a small set of measures that people can define, collect, interpret, and act on.

WORKSHEET

A dashboard can contain fifty numbers and still leave you wondering what to do next. The useful question is usually much simpler: What are we trying to change, how will we know it changed, and what will we do if it does not?

Use this worksheet to choose a manageable measurement set. It is deliberately platform-neutral, but it includes GA4 terminology where it helps. A KPI is useful only when its definition, data source, owner, and decision rule are clear.

There is no universal list of 'correct' marketing KPIs. A lead-generation business, an ecommerce store, and a subscription product can need very different measures.

1. Start with the business outcome

Question	Your answer
What business outcome are we trying to improve?	
Who is the customer or audience involved?	
What behavior should change?	
What would count as meaningful progress?	
What decision will this measurement support?	

2. Map the customer journey

Stage	What happens here?	What can we measure?	What would concern us?
Awareness			
Engagement			
Consideration			
Conversion			
Qualified lead / customer			
Revenue / retention			

3. KPI selection sheet

KPI	Definition	Formula / method	Source	Owner
1				
2				
3				

KPI	Definition	Formula / method	Source	Owner
4				
5				
6				

4. Event, key event, and business KPI

In GA4, an event records an interaction. A key event identifies an event that is particularly important to the success of the business. Your business KPI may sit one level higher still - for example, qualified leads, closed revenue, or customer retention. Keep those layers distinct.

Business outcome	Event(s)	Key event?	Downstream KPI	How will we connect them?
Generate qualified leads				
Generate purchases				
Increase renewals				
Other				

5. Metric definition card

Field	Definition
KPI name	
Plain-English definition	
Why it matters	
Formula	
Time window	
Primary source	
Data owner	
Review cadence	
Target or comparison point	
Known limitations	
Action when it moves	

6. Channel and campaign measurement

A channel metric should not be treated as proof that a channel caused the final outcome by itself. Use campaign tagging, landing-page behavior, key events, downstream lead/customer data, and attribution together when the decision calls for it.

Channel	UTM source	UTM medium	Primary KPI	Secondary KPI	Decision
Paid search					
Paid social					
Email					

Channel	UTM source	UTM medium	Primary KPI	Secondary KPI	Decision
Organic search					
Referral / partners					
Other					

7. Data quality checks

- [] The metric definition is written down in plain language.
- [] The data source is stable and the correct property, account, sheet, or CRM object is being used.
- [] Tracking has been tested with a real scenario and a known expected result.
- [] UTM values or source mappings use the approved naming system.
- [] Duplicate events, duplicate purchases, self-referrals, and obvious test traffic have been considered.
- [] The team has a plan for what to do when two systems disagree.

8. Monthly KPI review sheet

KPI	Current	Prior	Change	Why did it change?	What will we do?

9. What not to measure just because you can

- ☐ A metric has been retained because it helps a decision, not because it is easy to collect.
- ☐ Vanity metrics are labeled as context rather than treated as business outcomes.
- ☐ High-volume events have not been mistaken for high-value outcomes.
- ☐ A single percentage is not being used without its numerator, denominator, time period, and population.
- ☐ Benchmarks are treated as context and not as universal pass/fail standards.

10. Final measurement brief

Item	Final decision
Primary business outcome	
Primary KPI	
Supporting KPIs	
Important events / key events	
Primary reporting source	
Review cadence	
Owner	
Next measurement change	

Current GA4 terminology and documentation note

Google Analytics currently distinguishes events, key events, and ad-conversion measurement. This worksheet follows that terminology and uses current guidance on recommended events, event parameters, key events, and campaign URLs. Verify the current Analytics interface when implementing the worksheet, because menus and screens can change.
